

I support XM Radio and satellite radio. My boyfriend is a trucker and there are many ways that XM radio has helped him be a better trucker. When he is stressed, he listens to a comedy station to relieve the tension. When he is heading to bed he puts classical music on to softly sing him to sleep. When there are storms to be looking out for he turns it to the weather station. He doesn't always have time to pull off at a truckstop, find a place to park, walk in and then watch The Weather Channel on one of the tvs. All this is done by remote control so his attention isn't taken off the task at hand. One thing I really like about XM Radio is there isn't alot of talking unless you're on the talk radio station. Alot of people "zone out" when someone boring is talking. With XM Radio in your truck you always have someone there so you're not so isolated. Truck driving is a hard life. XM Radio makes it a little easier. I greatly oppose HR 4026! Thank you for your time and I trust you will do the right thing.

Sincerely, Susan Martin
